DEPARTMENTAL REPORTS

Departmental Reports

Departmental Computer System

The Departmental computer system consists of a network server and twelve (12) PC workstations. Three (3) of the workstations are equipped with Computer Aided Drafting (CAD) software and ArcMap. Six (6) workstations are equipped with a permit program called ICES. All workstations are programmed for word processing and spreadsheet work.

ICES Permit Program

The Engineering, Planning and Building Department purchased the ICES Permit Program in 1997 from Comprehensive Business Solutions, Inc. of North Royalton, Ohio and has been utilizing it to issue all permits since 2000.

The ICES program is used by the entire Engineering, Planning and Building Department to issue and track permits and contractor registrations. It also enables the building inspectors to record and track inspections and plan reviews.

The program enables the department to print a number of reports based on financial records, permit types, specific contractors, and a number of other variables set by departmental personnel.

The ICES permit program is maintained and updated by Comprehensive Business Solutions.
